### HEALTH GUARANTEE

The Olde English Bulldogge may be a healthier breed of dog than many modern Bulldog breeds. The Olde English Bulldogge is quickly becoming well respected in many working venues such as weight pull, therapy training, obedience, and several others. They have become excellent breathers and do not have to be kept in an air-conditioned environment on hot days. Artificial insemination is not a standard protocol when breeding Olde English Bulldogges; natural ties are the standard. Caesarean sections are only needed in the event of unexpected complications at delivery like with almost any breed of dog. However, the Bulldogge has been recreated using its counterpart the English bulldog and certain genes can pull from generations long ago, so it is important to read and understand about these types of bulldog defects.

We strive to produce an extremely healthy family pet the whole family can enjoy for years to come. If your puppy were to have a Genetic health issue other than what is deemed "standard" in this breed (see below paragraph) we require two vet exams from two different clinics by two different licensed Veterinarians stating the exact descriptive health issue. Diagnosis can vary from vet to vet and sometimes they can be wrong, so we require two separate exams for your protection as well as to get the true issue at hand. If the puppy in fact has a health issue, we will replace the puppy with a puppy from an available litter or the next available litter. Under no circumstances will we ever give a cash refund on any puppy at any time for any or all unforeseen reasons. If we cannot furnish your replacement puppy as promised due to unforeseen circumstances, we will give you the first available replacement of equal value. If you are purchasing from a future litter and the breeding does not happen, we will offer you a new puppy from a different breeding or litter of equal value. Shipping is at the buyer's expense if he/she is returning a puppy.

Explanation for the phrase above ( deemed "standard" in this breed ) WE HAVE NEVER HAD A CASE OF THIS IN OUR LINES. We do not cover cherry eye, entropion, skin allergies or loose hips . WE DO NOT

COVER any dysplasia if the dog has been allowed to be overweight, offered a high calorie high protein high calcium level puppy food (ALL RECEIPTS MUST BE SHOWN), exposed to an excessive amount of climbing of stairs, rough housed or played with over extensively the first year of his life. This does not mean you cannot play with your puppy. Falling or overly rough play can hurt any pet, any puppy. It's best to use care when playing with a puppy as the bones are not yet formed, much like that of a baby, Because the breed derives from the English Bulldog certain traits can come out in the dogs gene pool. We also do not cover the sounds a dog makes when they breathe. All our dogs breathe freely, however in the past generations of ancestors there could be a dog that had a "sniffing" sound or a "snorting" sound when breathing . We do not cover Mange as it is been proven to be a stress related curable parasite. We cannot control your home environment and we cannot control the stress level your dog has from his environment. Things that can cause a dog stress are moving, changes in home, bad food, flees, ticks or worms, violence, abandonment, illness, or food allergy. These are family pets and like humans they have feelings, they need to be loved. None of our breeding dogs have ever had mange nor their parents or grandparents. We take special precautions in our selections of breeding dogs to assure they have none of these listed above, however, no matter how careful in our selection, we cannot insure the condition of previous generations in our bloodlines that may of had those listed above, therefore we cannot guarantee against something we have no knowledge of. We do not guarantee color of dogs or eye color.

To be eligible for a 1-year guarantee, you must schedule a vet exam in the first 72 hours (3 days) of having your puppy to validate your guarantee, no exceptions. You will have a week advance or more of when your puppy will arrive to schedule with your veterinarian. We will not give a guarantee if you cannot show us a copy of his first health report. We will give you a delivery time in advance so you can consult with your veterinarian to get the puppy's scheduled health check-up.

Vaccinating pets is the pet owner's responsibility. You owe it to your loved ones and your pet to keep up with your shot schedule and worming. Nothing can be more devastating to a family then to lose their beloved pet because of lack of vaccinations. We wish to spare you the heart break so please vaccinate your pet!

Puppies over 5 months can go through a growing spree during this time. The cartilage on the pups is not always closed yet and pups can experience a growing pain, a bit of a limp or seem to be hard to get up. Do not worry, this is quite common on big breed big boned dogs. It should clear up on its own but during the time frame limit the pup's activity, let him rest more and eventually you will see he will be good as new. It is not a permanent situation; it is a temporary growing spree. It may not ever show up in your puppy but if your dog is highly active it could.

**MORE - STANDARD IN THE BREED - PLEASE READ BELOW AND TAKE PRECAUTION FROM OVER PLAYING AND OVER EXERCISING YOUR BULLDOGGE IT'S FIRST 2 YEARS - Note: This below must not be used as an alternative to seeing a qualified veterinary surgeon. The information posted here is mostly from years of personal experience. WE ARE NOT VETS and therefore can only offer the information below as a guide.**

PLEASE SEE A VET THAT UNDERSTANDS THE GROWTH OF A BULLDOG - CALL AROUND, TAKE SOME TIME SO YOU GET THE RIGHT VET FOR YOUR PUPPY.

Diet plays a large role in bone development. The same applies to calcium. Do not give your new puppy any extra calcium even in a vitamin - find a good well-balanced puppy dog food at 1.2% and stick to it. We have listed some below. We do require you feed your puppy a higher quality pet food for the warranty period. We do require and will ask to furnish receipts of dog food you have fed to your dog. IT IS VERY IMPORTANT WHAT YOU FEED YOUR BULLDOGGE PUPPY. What you feed your dog is how well or not your dog will grow in general health. We ask for the first 2 years of his or her life he/she is fed a high-quality large breed puppy food (low calcium) for his or her full growth potential. If you cannot furnish the receipts of the dog food you have fed for the first year, you will forfeit your guarantee. Most every Vet will recommend a top-quality dog food. If they do not, we will be happy to recommend a few. We recommend Taste of the Wild Fish and Wellness Core Salmon and Victor Professional Food. Check the ingredients of your dog food. Stay away from those that have corn or by product as the first ingredient. We want you and your puppy to have a lifetime of enjoyment. The Bulldogge is considered an adult at 2 years old.

I understand there is a guarantee that is laid out for my puppy and I will follow it if ANY issues health related or other issues arise with my dog/puppy \_\_\_\_\_ Buyer Initials
